Professional Experience

Software Engineer, Microsoft, Redmond, WA

September 2022 - Present

- Built customer-facing capabilities and data-source connectors for Microsoft Fabric Real-Time hub, simplifying how organizations discover, ingest, and manage streaming data from diverse sources.
- Redesigned and integrated the Guided Troubleshooter into Azure Portal, enabling customers to diagnose issues through self-service and reducing Microsoft customer-support costs.
- Bootstrapped and led development of the Service Explorer Playbook, standardizing on-call investigations and streamlining incident response for engineers.
- Technologies used: `React` `TypeScript` `C#` `Fluent UI` `Cosmos DB`

Software Engineer, Uber (Freight), Seattle, WA

July 2021 - September 2022

- Led frontend development of the Capacity Recommendation Engine, reducing load booking time by 50%.
- Revamped the financial details interface, reducing processing time by 25%.
- Technologies used: `React` `GraphQL` `Flow` `Go` `Thrift` `gRPC` `Cadence` `Kafka`

Software Engineer, Microsoft, Redmond, WA

May 2020 - July 2021

- Streamlined server load balancing by developing and deploying a load-balancer metadata provider.
- Expanded software load balancer (SLB) integration by implementing service chaining for third-party services.
- Technologies used: `C++` `C#` `PowerShell` `MSBuild` `SDN` `Azure`

Software Engineer, Celer Network, Mountain View, CA

September 2018 - May 2020

- Designed and implemented state-channel and cEconomy smart contracts.
- Improved channel-state security by developing a sidechain system.
- Built React-based web applications for interacting with smart contracts.
- Technologies used: `Solidity` `Truffle` `Ethereum` `Cosmos` `Go` `JavaScript` `React`

Software Engineer, Oath/Yahoo, Champaign, IL

June 2017 - September 2018

- Developed and released Navi, streamlining data analysis, improving efficiency by 20%, and reducing costs.
- Developed and optimized an internal product KPI analysis platform, improving accuracy by 10%.
- Technologies used: `Ember.js` `Less` `QUnit` `Cucumber` `Sauce Labs` `Lerna` `Express` `PhantomJS` `Elide`

Software Engineer, Veriflow, Champaign, IL

December 2015 - June 2017

- Developed an intent-based networking policy and network topology manager, reducing configuration time by 25%.
- Improved web client performance by transitioning from Backbone to Marionette.
- Reduced client response time by 20% through profiling and targeted client and server optimizations.
- Technologies used: `Marionette` `Vue` `D3` `Lodash` `Selenium` `Flask` `Socket.IO` `OrientDB` `Vagrant`

⚙ Projects

InboxPilot

- Developed a multi-tenant AI support workspace unifying SMS, email, and web chat with retrieval-grounded drafts, confidence-gated auto-replies, deterministic escalation, real-time updates, and auditable human handoffs.
- Separated portable business logic from provider adapters and backed asynchronous processing with a retrying PostgreSQL job queue, tenant RLS, append-only audit logs, and persisted RAG evidence.
- Technologies used: `Next.js` `React` `TypeScript` `PostgreSQL` `pgvector` `InsForge` `OpenRouter`

ChronoGuard

- Built an AI rollout-safety control plane for staged releases with deterministic guardrails, durable investigations, approval-gated mitigations, and recovery verification.
- Combined tenant-scoped PostgreSQL state, ClickHouse telemetry, resumable Trigger.dev workflows, bounded parameterized queries, signed actions, and immutable audit trails.
- Technologies used: `React` `TypeScript` `PostgreSQL` `ClickHouse` `Trigger.dev` `InsForge`

OpenSlot

- Built a server-first scheduling platform with timezone-aware availability, short-lived slot holds, conflict-free booking, cancellations and rescheduling, calendar sync, and reliable outbox-driven side effects.
- Protected booking integrity with PostgreSQL RLS and exclusion constraints, idempotent mutations, database-backed rate limits, and authenticated worker routes for email, calendar, and webhook delivery.
- Technologies used: `Next.js` `React` `TypeScript` `PostgreSQL` `RLS` `Zod` `Playwright`

PromptDock

- Created a local-first prompt recipe manager with reusable template variables, a global desktop launcher, cross-app paste, versioned import/export, and optional multi-user Firebase synchronization.
- Implemented role-based workspaces, invitations, offline-synced mode, conflict review, and storage adapters spanning Tauri JSON files, browser localStorage, and Cloud Firestore.
- Technologies used: `Tauri` `Rust` `React` `TypeScript` `Zustand` `Firebase` `Vitest`

SheetSQL

- Developed a SQL engine for Google Sheets supporting table mutations, joins, unions, subqueries, aggregates, filtering, grouping, ordering, and limits through custom menus and cell formulas.
- Earned 141 GitHub stars and 10 forks for bringing familiar relational-query workflows to spreadsheet-backed tables.
- Technologies used: `Google Apps Script` `JavaScript` `SQL` `Google Sheets`
